Release Notes – 2.3

Date: 08/31/2023

Disclaimer

The purpose of this document is to provide technical specifications to integrate with CoreLogic Print & Ship platform for document fulfillment. The information contained in this document is subject to change.

Release Notes:

1. Changes In Recipient Address Information

a. We have made some changes in Api to handle international addresses.

i. In Recipient Address, if you are not specifying country code or providing country code like US/USA/United States of America/ United States, then those addresses will be considered as US addresses. This will also trigger zip code pattern validation.

ii. If you are specifying country code except US, then system will ignore zip code validation and system will consider that address as an international address and handle package according to configuration for international shipping.

iii. Some of the sample requests and its output

1. In below example address will be considered as US address and validation will be triggered for zip code.

```
"RecipientInfo": {
    "Recipient": {
        "FirstName": "David",
        "LastName": "Mule"
    },
    "Address": {
        "Street": "300 Spring St NW",
        "City": "Palm Bay",
        "State": "FL",
        "Zip": "32905",
        "Country": "USA"
    }
}
```

```
"RecipientInfo": {
    "Recipient": {
            "FirstName": "David",
            "LastName": "Mule"
    },
    "Address": {
        "Street": "300 Spring St NW",
        "City": "Palm Bay",
```

```
        "State": "FL",
        "Zip": "32905"
    }
}
```

2. In below example address will be considered as foreign address and zip code format validation will be ignored.

```
"RecipientInfo": {
    "Recipient": {
            "FirstName": "David",
            "LastName": "Mule"
    },
